

## Admin

If an admin wants to access the admin panel with a registered domain, follow this URL: <https://domainurl/admin>, after entering this url admin can access the admin login page.

If an admin wants to access the admin panel with a localhost, follow this URL: <http://localhost/foldername/admin>, after entering this url admin can access the admin login page.

### Admin Login Credential for Project Testing

**Table 10: Admin Login Credential**

| Admin ID | Password | UserType |
|----------|----------|----------|
| admin    | admin    | Admin    |

## User

If you want to set it up through a domain, you should visit this URL first: <domainname/index.php>

Also, if you want to verify the site through localhost, you need to install **Xampp/ Wamp** then you need to put the code through this local path : **C:\xampp\htdocs**. Then create any folder in this path and put the code in it, Then you can test the site through this link by going to the web browser: <http://localhost/foldername/index.php>
